1.0 Executive Summary

Cisco Market Connections is a digital engagement platform designed to empower Cisco Sales and Marketing teams with customer-centric insights, industry trends, curated content, and performance analytics.

The platform bridges the gap between Cisco representatives and prospective customers by enabling personalized communication through social media channels, email campaigns, and knowledge-sharing initiatives. By leveraging customer search analytics and behavioral insights, the application ensures that the right content reaches the right audience at the right time.

This runbook serves as the operational guide for administering, monitoring, supporting, and maintaining the Cisco Market Connections ecosystem.

2.0 Business Vision

Why Cisco Market Connections?

Modern customers expect personalized interactions and relevant information. Cisco Market Connections transforms customer intelligence into meaningful engagement opportunities by providing:

- ✓ Personalized customer insights
- ✓ Industry trend intelligence
- ✓ Social media engagement capabilities
- ✓ Knowledge repository access
- ✓ Employee recognition and performance visibility
- ✓ Data-driven sales enablement

3.0 Platform Architecture Overview

The Cisco Market Connections platform is designed using a scalable, cloud-ready multi-tier architecture that seamlessly connects users, content repositories, analytics engines, and social engagement channels through a unified digital experience.

The architecture enables secure content distribution, customer engagement, search analytics integration, performance tracking, and social collaboration while ensuring high availability, responsiveness, and future scalability across web and mobile platforms.

4.0 Key Platform Components

Refer below brief description for key components:

Component	Purpose
Analytics Engine	Generates customer interest insights
Content Repository	Stores articles, blogs, and marketing assets
Trend Dashboard	Displays industry-specific trends
Employee Performance Hub	Tracks achievements and reward points
Social Sharing Module	Enables content sharing through social channels
Reporting Engine	Generates business intelligence reports
Notification Service	Sends platform alerts and updates

5.0 Operational Excellence Framework

The platform is considered operationally healthy when:

KPI	Target
Application Availability	≥ 99.9%
Dashboard Load Time	< 3 Seconds
Content Synchronization Success	100%
Analytics Processing Success	99%
Notification Delivery Success	99%
Social Sharing Availability	99%

6.0 Daily Operations Dashboard

The **Daily Operations Dashboard** serves as the central landing page for Cisco Market Connections, providing sales and marketing teams with a real-time snapshot of customer engagement activities, industry trends, content performance, and team achievements.

The dashboard consolidates key business insights into a single view, enabling users to quickly identify prospective opportunities, monitor content-sharing effectiveness, track customer interactions, review reward points and performance metrics, and stay informed about trending topics relevant to their target accounts. Through intuitive visualizations and actionable analytics, the dashboard helps teams make informed decisions and improve customer outreach effectiveness on a daily basis.

Morning Health Check

Every business day, support teams should verify:

- Application Availability
- Analytics Engine Status
- Content Repository Synchronization
- Social Media Connectivity

- Notification Services
- Employee Dashboard Availability
- Database Health

7.0 User Journey Overview

Sales Representative Journey

1. Login to Cisco Market Connections.
2. View customer trend insights.
3. Access recommended content.
4. Share content through email or social platforms.
5. Track engagement metrics.
6. Monitor personal performance score.

Expected Outcome

Sales representatives can engage customers with relevant content and improve conversion opportunities.

Marketing Manager Journey

1. Publish approved content.
2. Review customer engagement metrics.
3. Monitor trending topics.
4. Analyze campaign performance.
5. Generate management reports.

Expected Outcome

Marketing teams gain visibility into content effectiveness and customer engagement.

8.0 Content Operations

The **Content Operations** module serves as the central hub for managing, organizing, and distributing content across the Cisco Market Connections platform. It enables sales and marketing teams to access curated articles, industry insights, knowledge resources, and campaign materials aligned with customer interests and business objectives.

The module streamlines content discovery, categorization, publishing, and sharing processes, ensuring that users can quickly find relevant information and engage prospects through email and social channels with timely, personalized, and impactful content.

Content Lifecycle

Content Validation Checklist

- Before publishing:
- Content Category Assigned
- Industry Tag Assigned
- Metadata Validated
- Social Sharing Enabled
- Search Index Updated

- Approval Completed

9.0 Analytics Operations

Analytics Operations provides actionable insights into customer interests, content engagement, search behavior, and industry trends, enabling Cisco sales and marketing teams to make data-driven decisions and deliver more personalized customer interactions.

Analytics Data Flow

Validation Checks

Check	Expected Result
Analytics Job Status	Successful
Trend Generation	Successful
Dashboard Refresh	Successful
Recommendation Accuracy	Validated

10.0 Employee Recognition & Performance Hub

The Employee Recognition Module encourages collaboration, engagement, and healthy competition within Cisco teams.

Key Features

- Reward Points
- Peer Recognition
- Performance Leaderboards
- Achievement Badges
- Manager Insights

11.0 Monitoring & Alerting Framework

The **Monitoring & Alerting Framework** provides continuous visibility into the health, performance, security, and operational status of the Cisco Market Connections platform. It proactively monitors critical application components, integrations, APIs, databases, and user activities to ensure smooth and uninterrupted business operations.

The framework generates real-time alerts and notifications for system failures, performance degradation, integration issues, security events, and other operational anomalies, enabling support teams to identify, investigate, and resolve issues before they impact users or business processes.

Critical Services

Service	Monitoring Requirement
Mobile Application	Availability
API Layer	Response Time
Analytics Engine	Processing Success
Notification Service	Delivery Rate
Database	Performance
Content Repository	Synchronization Status

12.0 Incident Management

The **Incident Management** process ensures the timely identification, logging, classification, escalation, and resolution of application, infrastructure, integration, and security-related incidents within the Cisco Market Connections platform. Its primary objective is to minimize business disruption, restore normal service operations as quickly as possible, and maintain a consistent user experience.

The framework establishes clear procedures for incident detection, impact assessment, stakeholder communication, root cause analysis, and resolution tracking. By leveraging monitoring tools, automated alerts, and defined escalation paths, the Incident Management process helps support teams respond

effectively to critical issues while ensuring accountability, transparency, and continuous service improvement.

Severity Matrix

Priority	Description	Response Time
P1	Complete Platform Outage	Immediate
P2	Critical Feature Unavailable	1 Hour
P3	Partial Functionality Impact	4 Hours
P4	Cosmetic Issue	Next Release

13.0 Troubleshooting Playbook

The **Troubleshooting Playbook** serves as a practical guide for diagnosing, investigating, and resolving common issues within the Cisco Market Connections platform. It provides standardized troubleshooting procedures, validation steps, probable causes, and recommended resolutions to help support and operations teams restore services quickly and consistently.

By following documented troubleshooting workflows, teams can reduce resolution times, minimize business impact, and ensure efficient handling of application, integration, performance, and user-related issues.

Content Not Visible

Possible Causes

- Content not approved
- Synchronization failure
- Search index issue

Resolution

- ✓ Verify approval status
- ✓ Re-run content synchronization
- ✓ Refresh search index

Customer Trends Not Updating

Possible Causes

- Analytics processing failure
- Missing customer data

- Dashboard refresh issue

Resolution

- ✓ Review analytics logs
- ✓ Verify data ingestion
- ✓ Execute dashboard refresh

14.0 Security & Compliance

Cisco Market Connections follows enterprise-grade security practices.

Security Controls

- Role-Based Access Control (RBAC)
- Secure API Authentication
- Data Encryption in Transit
- Audit Logging
- Activity Monitoring
- Session Management
- Password Governance

15.0 Business Success Indicators

The platform achieves its objectives when:

- ✓ Customer engagement increases
- ✓ Sales follow-up effectiveness improves
- ✓ Content sharing activity grows
- ✓ Employee participation increases
- ✓ Industry insights are actively consumed
- ✓ Customer relationship quality improves

16.0 Glossary

Term	Definition
API	Application Programming Interface used for communication between Cisco Market Connections and external systems.
Analytics Engine	Component responsible for processing customer search behavior, engagement metrics, and trend data.

CMS	Content Management System used to create, manage, organize, and publish content across the platform.
Content Repository	Centralized storage location containing articles, marketing collateral, knowledge assets, and other content resources.
Customer Engagement	Interaction between Cisco sales representatives and prospective customers through content sharing, email, or social channels.
Dashboard	A visual interface that provides real-time insights, analytics, alerts, and performance metrics.
Data Integration	The process of exchanging and synchronizing data between Cisco Market Connections and external systems.
Email Campaign	A targeted communication initiative used to share content and engage prospective customers through email.
Engagement Metrics	Measurements used to evaluate customer interactions, including content views, shares, clicks, and responses.
Incident	An unplanned interruption, degradation, or failure of an application, service, or system component.
Incident Management	The process of identifying, tracking, escalating, and resolving operational issues affecting the platform.
Integration Service	Middleware or service responsible for transferring data between systems and applications.
KPI	Key Performance Indicator used to measure business performance, engagement effectiveness, and user activity.
Knowledge Repository	A collection of Cisco-approved articles, documentation, training materials, and reference content available to users.
Market Connections	Cisco's proposed digital platform for connecting sales and marketing teams with prospective customers through personalized content and analytics.
Monitoring	Continuous observation of system performance, application health, integrations, and user activities.
Notification	An automated message generated by the system to inform users about events, alerts, or actions requiring attention.
Operations Team	Personnel responsible for monitoring, supporting, maintaining, and troubleshooting the platform.
Performance Dashboard	A dashboard displaying employee achievements, engagement statistics, sales metrics, and reward points.
Prospective Customer	A potential customer identified through business interactions, analytics insights, or marketing activities.
Reward Points	Performance-based points awarded to sales and marketing team members for achieving predefined objectives.
Role-Based Access Control (RBAC)	Security mechanism that restricts system access based on assigned user roles and permissions.
Search Analytics	Data collected and analyzed from user search activities to identify interests, trends, and business opportunities.
Social Sharing	The ability to distribute content through platforms such as LinkedIn, Facebook, Twitter, and other social networks.
Stakeholder	Any individual or group with an interest in the platform, including users, managers, administrators, and business sponsors.

System Alert	An automated notification generated when predefined operational thresholds or error conditions are met.
Trend Analysis	The process of evaluating search patterns, customer interests, and industry developments to identify business opportunities.
Troubleshooting Playbook	A documented set of procedures and best practices used to diagnose and resolve platform-related issues.
User Activity Log	A record of user actions performed within the platform for monitoring, auditing, and compliance purposes.
User Profile	A collection of user-specific information, preferences, permissions, and activity history maintained by the platform.
Workflow	A sequence of tasks or business processes executed within the application to achieve a specific objective.
SLA	Service Level Agreement that defines expected service availability, response times, and support commitments.
UAT	User Acceptance Testing conducted to verify that the application meets business and functional requirements before production release.
Production Environment	The live environment where the Cisco Market Connections platform is accessed by end users.
Staging Environment	A pre-production environment used for testing and validation before deployment to production.
Authentication	The process of verifying a user's identity before granting access to the application.
Authorization	The process of determining what actions and resources a user is permitted to access after authentication.
Audit Trail	A chronological record of system activities, user actions, and operational events maintained for compliance and troubleshooting purposes.

18.0 Common Acronyms

Acronym	Full Form
API	Application Programming Interface
CMS	Content Management System
KPI	Key Performance Indicator
RBAC	Role-Based Access Control
